

**TNT ('The New Thing' without a swingarm) :**

1. Removes nearly 1.5kg of weight from the nose of the board (**completely eliminates the swingarm** and gets rid of the 'nose-heavy' feel).
2. Completely eliminates ground clearance problem at the nose.
3. Elimination of ground clearance problem allows boards to be made with smaller wheels. Current smallest wheel size is 16" and new system will allow 10-12" wheel size.
4. Able to be ridden on ramps & half-pipes etc (incredibly important as far as demos etc at major events and boosting our market acceptance).
5. More front wheel travel to allow for tighter turns.
6. Eliminates our biggest current problem in production of controlling wheel turn angle (swingarm adjusters no longer required).
7. Stronger frame design (reduced lever arm force on frame).
